

NAME _____

DATE _____

Listening Games: Fugue BACH Fugue in B-flat Major, BWV 866

MUSICAL MATCHING

In the musical world, we have different names for different kinds of songs, based on **patterns** in the music. Most songs are made up of patterns you can hear easily—just think of your favorite song on the radio. Can you hear how one section, usually called the chorus or refrain, repeats over and over, always sounding the same each time? That’s a kind of pattern!

Classical composers also use patterns in their music. Just like with your favorite song, the way they put their patterns together creates a musical structure, or **form**, and these forms have different names. The form (or name of the form) tells us how the music is put together, and what kind of music it is.

MUSICAL MATCHING

Let’s play a quick matching game to learn some new musical terms! Using the musical dictionary found at [Classics for Kids Musical Dictionary](#) as a reference, look up the words below and match them to their correct definition by writing the word in the blank next to it.
